BILINGUAL SEARCH THAT HARNESSES THE POWER OF THE WEB

WeBiSearch is a browser-based reference tool for language professionals. It uses a powerful multilingual search engine to scan your chosen websites for the terms you're looking for and their equivalents. You can use it to quickly search within the site of your choosing or a preset list of multilingual sites. **WeBiSearch** is updated regularly with new multilingual sites. What's more, it automatically updates the index with each search, giving users access to up-to-the-minute results.

How can I access WeBiSearch? Simply enter the following URL in your preferred browser: webisearch.com Try it out, it's free!

How does it work? Searching with **WeBiSearch** is done in four simple steps:
1. Choose your language pair
2. Select a preset website or enter the site of your choice
3. Enter a term or phrase
4. Click Search

Example: Choose the English–French language pair, then search for the term "public heath" on the World Health Organization's website:

| Bilingual Web Search	
Direction:	English To French
Predefined Website:	World Health Organization ✕ ▾
Or Type a Website:	
Term to Search:	public health

Search

BENEFITS

- CHOOSE FROM A PRESET LIST OF BILINGUAL WEBSITES OR ENTER A URL
- FAST, USER-FRIENDLY BILINGUAL SEARCH
- NEW WEBSITES AND LANGUAGE PAIRS ADDED REGULARLY
- VIEW SOURCE AND TARGET RESULTS SIDE BY SIDE
- WEBSITES ORGANIZED BY SECTOR
- VIEW AND DOWNLOAD BITEXTS

Once the Search button is clicked, a table of results will appear. Links to source-language pages containing the term are to the left, while links to the corresponding target-language pages are to the right.

To quickly view both source and target pages, click on the Both Pages link at the bottom of the chosen excerpt.

To view the term in its bilingual context, click on the Bitext link.

You can view the bitext to gain more information about how the term is used, or download the bitext to use later. Bitexts can be viewed in any browser or indexed for use in LogiTerm.
