

New and Improved Features in BRIDGE TERM WEB

5.1.0

- Integration of the **LogiTerm** pretranslation function
- Removal of the TradooIT pretranslation engine
- Ability to enter word counts manually for all match levels
- Flash add-on no longer required to upload files
- No limit to the number of files that can be uploaded
- The “Message for client” for delivery can also be entered when a request is created
- Possibility of archiving files directly in client folders (LogiTerm 5.7.1 or later required)
- The request number format is now YYMMDDxxx: addition of two digits to indicate the day and a three-digit number that changes incrementally with each new request
- Option to “Show received date on the invoice” (found in the client profile)
- Possibility of exporting to ADX format (Acoma Accounting Suite)
- Addition of the following information to the proposal email sent to translators:
 - Date the request was received
 - Requester (only if the translator has access to client information)
 - Estimated number of hours
 - Instructions for the request
 - Name of the coordinator (person who created the work order)
 - Coordinator’s telephone number
 - Coordinator’s email address
- Introduction of two columns in the “Client Billing Report”:
 - “Request Type,” which was previously displayed as the task type
 - “Task Type,” which was not displayed

5.0.10

- Client billing reports and to be billed reports (by client) now available in CSV format
- Addition of **Project** field under request details and addition of **Project** column in the production by client report

5.0.9

- Possibility of billing the coordination task as a percentage of the total invoice amount
- Removal of timer
- Reversal of sort sequence for requests from a client

5.0.8

- Addition of title in the header (grey area) of each request
- Ability to change the date of sub-requests in a single operation

5.0.7

- Ability to use actual time spent, rather than the estimated time, at the delivery and invoicing stages

5.0.6

- Client billing report available in CSV format

5.0.5

- Inclusion of a link to the request in all messages sent via **BridgeTerm Web**
- Ability to submit an update of a file in a request that has already been sent

5.0.4

- Possibility of modifying the display sequence of tasks and translators assigned to tasks

5.0.2

- Exporting of data in CSV format

5.0.1

- Addition of task types in comprehensive reports (by client)
